

Cordata Back to Work

Technology-enabled assessment and outreach for increased workforce safety and reduced risk of infections

Cordata's integrated Back to Work solution allows employers to quickly and confidently assess and monitor the status of their workforce in line with COVID-19 safety protocols. Cordata Back to Work provides a framework so companies can proactively manage risk and protect employees and customers in a rapidly changing environment.

- Assess and monitor employees who have COVID-19 symptoms
- Improve adherence to COVID-19 protocols and safety measures
- Communicate testing and screening requirements for working in company facilities
- Better utilize staff, especially those that require specific certifications or licensing, by identifying employees cleared to work
- Proactively follow up on exposures to reduce spread of COVID-19 in the workplace
- Coordinate and report on workforce readiness to senior management
- Engage employees with automated communication and educational materials about symptoms, work attendance and the company's commitment to their wellbeing
- Create and update employee return-to-work plans based on federal, state and local guidelines, and quickly update them as new information emerges
- Collect data and demonstrate compliance with safety protocols to improve customer satisfaction and confidence

Assess

Triage and evaluate COVID-19 symptoms and history in your workforce

Trace

Identify cases for comprehensive follow-up using recommended protocols

Educate

Engage employees in automated wellness initiatives to reduce disease spread

Return

Establish plans for returning employees to work and keeping them safe

A Plan for the New Normal

The impact of the COVID-19 pandemic has been devastating to many employers. Even those whose business operations allowed employees to work remotely now face the daunting task of assessing their workforce and planning when it can return to shared facilities. Others have continued to operate with front-line staff and need to actively monitor employees to minimize the risk of outbreaks. The scope and gravity of the problem make robust planning and advanced technology essential for a return work and adjustment to the “new normal.”

Proven Technology to Execute the Plan

Cordata’s case tracking and engagement solutions are used by more than 100 healthcare and community organizations to monitor and support at-risk populations affected by complex diseases and public health issues.

The Cordata Platform at a Glance:

Back to Work is built on Cordata’s proven and flexible case tracking and engagement platform.

- Used by 100+ organizations nationwide
- Manages more than 500,000 healthcare interactions annually
- Cloud-based – easy to deploy and use
- Compliant with HIPAA and ADA requirements
- Configurable to support evolving protocols and custom business needs

Safety: Individual employees can be monitored to promote workforce safety.

Security: The Cordata platform is HIPAA-compliant and securely manages protected health information (PHI) separate from personnel files in line with ADA requirements.

Insights: Dashboards and reporting tools identify and monitor geographic and population trends.

Flexibility: Action plans follow recommended protocols and can be easily adapted as guidelines change.

Get your people back to work safely and securely, quickly and confidently.
